Bowen's Problem 32 and the conjugacy problem for systems with specification

Bo Peng (McGill)

Caltech Online Logic Seminar, January 29, 2025

Bo Peng (McGill)

Cantor systems

Structure of the talk

- 1. **Bowen's Problem 32** and conjugacy of symbolic systems with specification
- 2. Conjugacy of Cantor systems with specification and a **problem of Ding and Gu**,
- 3. Conjugacy of Hilbert cube systems with specification and a **problem of Bruin and Vejnar**.

Cantor systems

In the 1970, Rufus Bowen compiled an influential problem list.

How is this related to systems with specification?

Fact

The conjugacy problem for **pointed Cantor systems with specification** is Borel-reducible to $E_{\rm sc}$ restricted to metrics whose completion is compact zero-dimensional.

Proof

Given a pointed Cantor system with specification (X, φ, x) , map it to the metric on \mathbb{N} induced on via the map $n \mapsto \varphi^n(x)$. That is put

$$d(n,m) = d_X(\varphi^n(x), \varphi^m(x)).$$

This is a Borel reduction.

Cantor systems 000●0

By the way of computing the complexity of the conjugacy of pointed Cantor systems with specification, we solve Ding and **Gu's problem**.

By the way of computing the complexity of the conjugacy of pointed Cantor systems with specification, we solve Ding and **Gu's problem**.

Theorem (Deka–Kwietniak–P.–Sabok) The E_{sc} restricted to metrics whose completion is compact zero-dimensional is =⁺.

Bo Peng (McGill)
